

BEAR CREEK'S Specialist High Skills Major TRANSPORTATION

From a transportation technology stand point we have a unique opportunity here at Bear Creek which can provide strong specialization for our students. Students have the option of focusing on small engine repair allowing an emphasis on Small Engines and Recreational vehicle repair.

Another avenue that is available is our Heavy Equipment Co-op that allows students to explore the field of equipment operators and technicians while still completing their required courses. Students may also just keep a general focus on transportation and explore all areas of the transportation industry.

Our partnerships with the colleges and industry are strong and this allows participants to see first hand where the demand in industry is going. These experiences also give students an insight into expectations and requirements that post secondary and employers are looking for.
