

Transportation – Bear Creek Secondary School

A unique opportunity is available at Bear Creek to provide students with a strong specialization in transportation technology. Three options are available. After an expansion of the automotive shop that occurred during the 2009-2010 school year, students have the option of focusing on small engines and recreational vehicle repair. Another avenue that is available is our Heavy Equipment and Construction Trades Co-op that allows student to explore the field of equipment operators and technicians while still completing their required courses. Students may also keep a general focus on transportation and explore all areas of the transportation industry.

Our strong partnerships with colleges and industry allow participants to see first hand where the demand in industry is going. These experiences give students an insight into expectations and requirements that post secondary schools and employers are looking for.

For more information, please contact the Guidance Department at (705) 725-7712.
